

## Citizen science

### Online tasks

1. Check the nearest beach in Marine LitterWatch.

How many surveys are there?

What conclusions can you make about the trends of this beach? Why?

What kind of seasonal dynamics can you see from the data?

2. Check what citizen science apps are available for:

- marine litter
- bird watching
- jellyfish watching
- air quality

3. Make a report on the basis of the ICT Tool or another internet platform on a topic you are interested in.

### Outdoor tasks

1. Do a beach-cleaning or monitoring event and report it to Marine LitterWatch.

2. Take photographs on the beach and make a presentation about marine litter for your school, club or community.

**Common borders. Common solutions.**
